Demographics

Why is it important?

Demographic data helps us understand populations by presenting information based on characteristics such as race, age, and native language. This data is particularly important in illuminating changes and trends. Some demographic data can be useful in measuring the impact of public and private programs, and to bolster arguments for or against public policies.

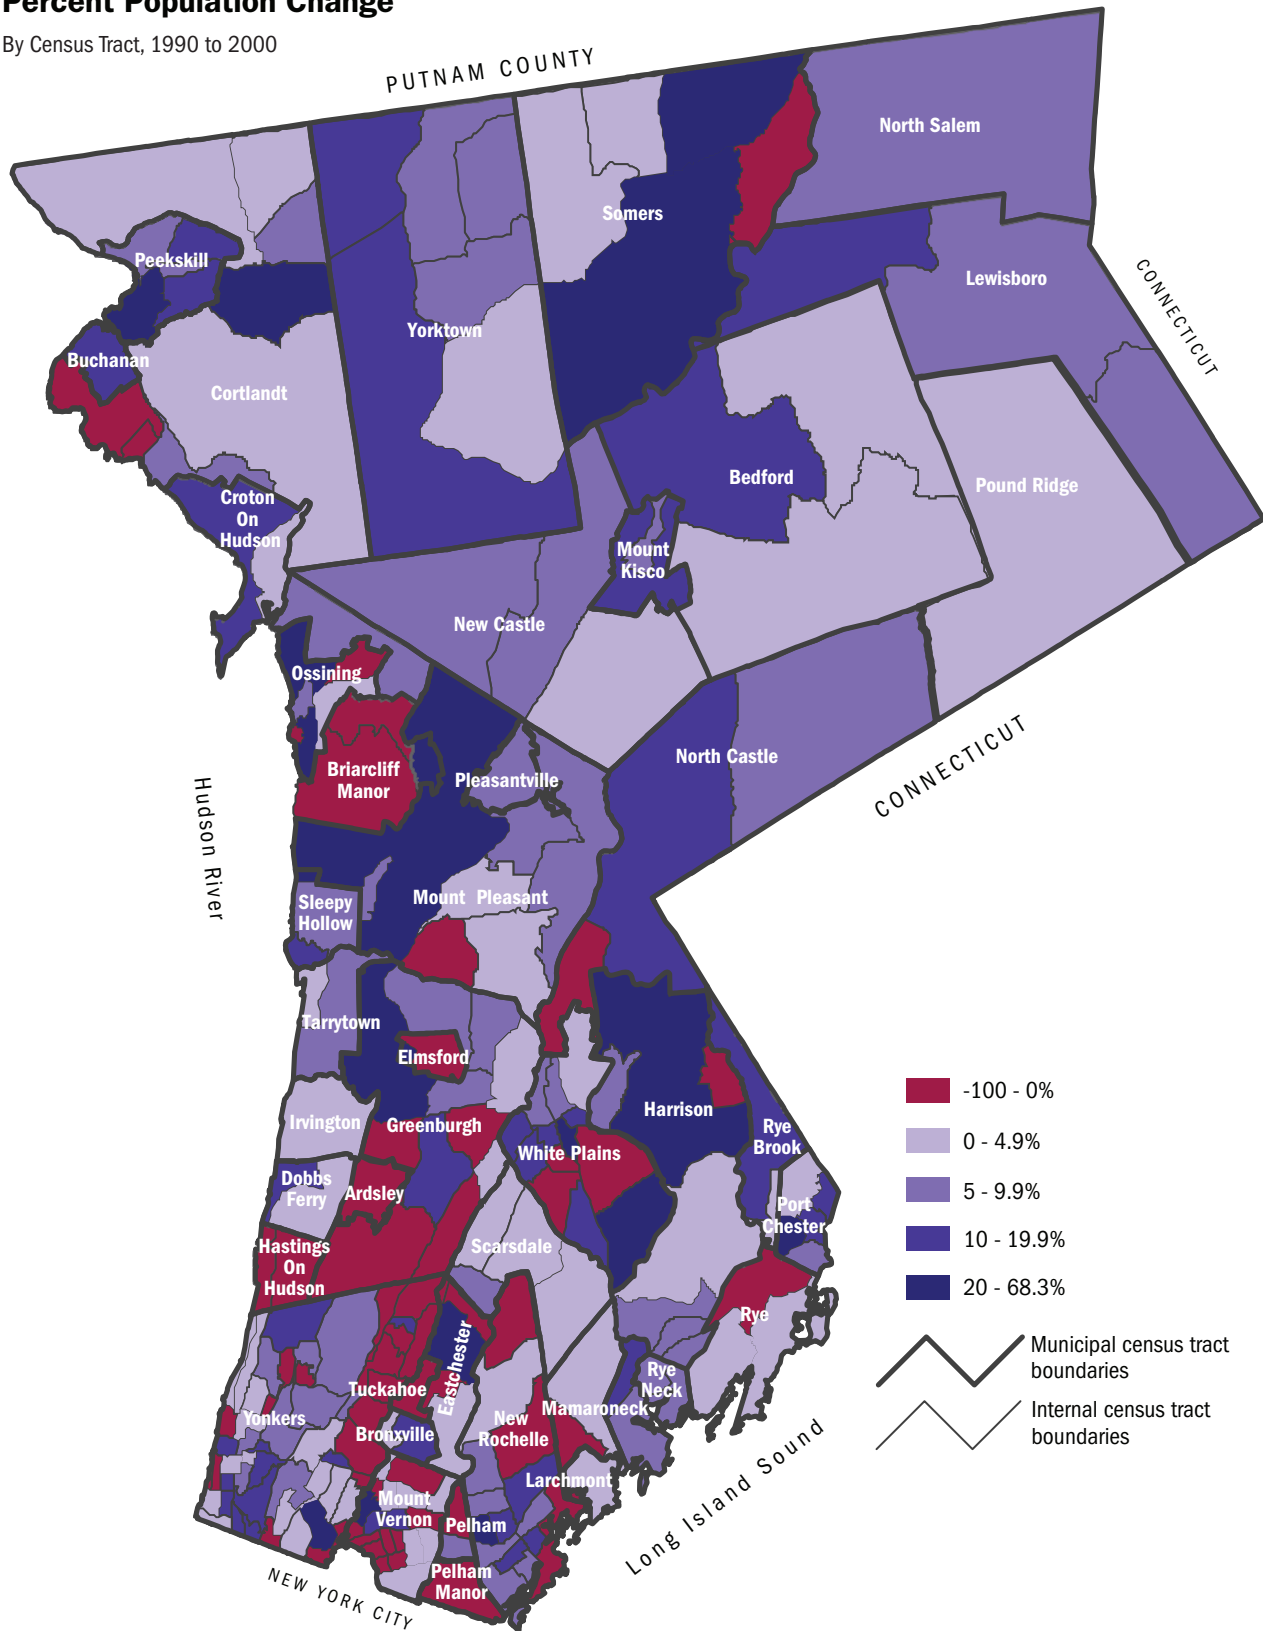

The general demographics in this section are key to understanding all of the other specific data sets in the following sections. They can also be utilized to produce more advanced statistical analyses such as rates, normalization of data, weighted averages, and correlations. The data in this section is drawn largely from U.S. Decennial Census and from the Census Bureau's American Community Survey.

What stands out?

- Since 1990, there has been a steady increase in the total population and the child population in Westchester County. In fact, Westchester was one of only nine counties nationwide to experience a more than 20% increase in the under-18 age group between 1990 and 2000. According to the 2006 American Community Survey, there 949,355 people in Westchester, of whom 234,666, or 25%, are under 18 years old.
- The racial and ethnic makeup of Westchester County is changing. It is important to understand these changes when planning programs and services that are culturally and linguistically sensitive, accessible and appropriate for our County's diverse population. Although the general population is increasing, the White population is decreasing in number and as a percent of the total population. The Black or African American population continues to increase at a rate similar the general population. The biggest factors contributing the increase in general population has been the increase in the Asian and Hispanic/Latino population, each experiencing increases greater than 20% from 2000 to 2006. A major factor contributing to the increase is the Hispanic/Latino population has been a significant increase in the foreign born population from Latin America over the last 15 years.
- In 2006, the county population was 68% White, 14% Black or African American, 6% Asian, and 12% all other race categories (including people of two or more races). The Hispanic/Latino population—defined by the US Census as a separate ethnic group which may be of any race—represents 19% of the total population. It is important to note that these racial/ethnic populations are not distributed evenly across all of Westchester; in fact, local populations can vary dramatically from countywide percentages.
- In 2006, 33% of all households in Westchester are composed of families with children under 18 years old. Of those families, 23% are single parent families (no spouse in the household).
- The number of foreign born people increased significantly by 29.5% from 1990 to 2000, this trend showed signs of flattening by 2006. Nearly 18% of Foreign born individuals have incomes at or below the federal poverty level, while only 11% of native born individuals have incomes at or below the poverty level.
